| DEGENERATIVE BONE DISEASE | - |
| AUTOIMMUNE AND INFLAMMATORY DISORDERS | |
| INFECTIOUS DISORDERS | |
| CONNECTIVE TISSUE DISORDER | |
| Lemone and Burke Chap 42 | |
| Olejastivas | |
| Objectives | |
| Discuss etiology, pathophysiology, clinical manifestations, and collaborative management of: Osteoporosis, gout, osteopenia, Paget's disease, osteomalacia and osteomyelitis Osteoarthritis, rheumatoid arthritis, septic arthritis, Sjogren's syndrome, and scleroderma | |
| | |
| Metabolic Bone Disease | |
| □ Osteoporosis □ Gout □ Paget's Disease | |
| □ Osteomalacia | |
| | |
| | |
| | |

Osteoporosis

- □ Porous bone
- Low bone mass
- □ Structural deterioration of bone tissue
- $\hfill \square$ Increased bone fragility
- □ Known as the silent thief
 - Robs the skeleton of it's banked resources
 - Associated with aging

Osteoporosis

- □ Risk factors
- Family history
- Female
- Low bone mass at age 25-35
- Caucasian or Asian
- Small build
- Life style
 - Insufficient calcium intake
 - Inactivity
 - Smoking
 - Excessive alcohol
- Chronic diseases

Osteoporosis: Etiology and Pathophysiology

- · Exact patho unclear
- Bone resorption exceeds bone deposition
- · Bone mass loss
 - Older women 35-50%
 - Older men 20-35%
- Osteoporosis most commonly in the bones of the spine, hips, and wrists

Osteoporosis - Clinical Manifestations

- □ Back pain or spontaneous fracture
- □ Fracture from minimal trauma
- □ Hip, vertebral or wrist fracture
- □ Collapsed vertebrae resulting in loss of height and kyphosis
- □ Spinal deformities
- $\hfill \square$ Severely stooped posture

Osteoporosis - Diagnosis

- □ H&P
- □ Bone density scan
- □ Lab tests
 - Alkaline Phosphatase (AST)
 - Serum bone Glaprotein
 - Serum Calcium
 - Thyroid function test

Osteoporosis – Collaborative Management

- $\quad \ \, \Box \ \, \text{Preventative}$
 - Health promotion
 - Nutrition
- Medication
 - HRT
 - Calcium supplements
 - Vitamin D
 - Biphosphonates
 - Androgens
 - Pain management
- □ Fall prevention
- □ Exercise

Osteoporosis - Nursing Diagnoses

- □ Risk for injury
- □ Impaired physical mobility
- □ Acute pain or chronic pain
- □ Impaired nutrition less than body requirements
- □ Health seeking behavior

Osteopenia

- □ What is osteopenia?
 - Bone mineral density (BMD) that is lower than normal peak BMD, but not low enough to be classified as osteoporosis
 - Can be a precursor to osteoporosis

Gout

- □ Inflammatory response to high uric acid level
- □ Deposites of urates in connective tissue
- □ Inflammation causes nodules tophi
- □ Primary or secondary disorder
- □ Affects >84% of all Americans

Gout - Clinical Manifestations

- Pain, swelling, redness, warmness, stiffness in affected joint
- Inflammation of tissues around joint causes skin to be swollen, tender - sore if even slightly touched
- □ Usually attacks the big toe first (75% of first attacks)
- □ Acute onset and usually occurs at night

Gout - Manifestations

- □ Three stages:
 - Asymptomatic hyperuricemia
 - Acute gouty arthritis
 - □ Chronic (tophaceous) gout

Gout -Diagnosis

- □ By clinical symptoms
- □ Serum uric acid levels
- □ Urinary uric acid levels
- Evaluation of fluid aspirated from acutely inflamed joint or material aspirated from a tophus
 - This is the most definitive test for gout
- □ CBC (elevated WBC)
- □ Elevated ESR during acute attack

Gout -Interdisciplinary Care

- □ H&P
- □ Medication
 - Colchinine
 - Allopurinol
 - NSAIDs
 - Corticosteroids
- Diet
 - Vit E
 - Amino Acids
 - Dark berries
 - Low purine diet
- □ Weight loss for obese patients
- □ Liberal fluid intake
- □ Rest

Gout - Nursing Diagnosis

- □ Acute pain
 - Assess affected areas
 - Position affected joint for comfort
 - Protect joint from pressure
 - Take NSAIDs and anti-gout meds as prescribed
 Watch for side effects of medication
- Bedrest
- □ Knowledge deficit
 - Disease and manifestation
 - Rationale for meds
 - Importance of increase fluids
 - Alcohol abstinence

Paget's Disease (Osteitis Deforma)

- An excess of bone destruction and unorganized bone formation
- · Cause is unknown
- Average age at dx is 50-60 yrs
- Affects the axial skeleton

| | • | ١ |
|--|---|---|
| | | |
| | | |
| | | |

Paget's

- □ Pathophysiology:
 - Slow progression
 - Osteoclastic bone resorption
 - Osteoblastic bone formation
 - New bone larger and weak
 - Vascularity increases
 - Soft bone becomes hard and brittle

Paget's

- □ Manifestation
 - Musculoskeletal effects
 - Neurologic effects
 - Cardiovascular effects
 - Metabolic effects
- □ Diagnosis
 - X-ray
 - Bone scans
 - □ CT
 - MRI
 - Lab tests

Paget's - Manifestation

Paget's Collaborative Management

- □ Relieve pain
- □ Prevent or minimize complications
- □ Medication
 - Pain relieve
 - Biphosphonates
 - Calcium supplement
- □ Surgery

Paget's Nursing Diagnosis

- □ Chronic pain
 - Assess location and quality
 - Heat therapy and massage
 - Teach NSAID, placement of brace/corset
- □ Impaired physical mobility
 - Assitive device when ambulating
 - Teach placement of brace/corset, good body mechanics

Osteomalacia (Adult Rickets)

- □ Vitamin D deficiency resulting in decalcification and softening of the bone
 - Not enough Vitamin D in diet
 - Not enough exposure to sunlight
 - Impaired intestinal absorption of fats
 - Increased renal loss or decreased absorption of phosphate
- □ Same as Rickets in children

Osteomalacia -

□ Pathophysiology

- Vitamin D deficiency
 - Lack of intake
 - Lack of sunlight
- Phosphate depletion
- Acidosis
- Bone mineralization inhibitors
- □ CRF
- Calcium malabsorption

Osteomalacia - diagnosis

- □ Lab tests
 - Calcium

□ Health history

- Alk Phos
- Thyroid function

Osteomalacia -Collaborative management

- □ Correct Vitamin D deficiency
 - Increase diet intake
 - Expose to sunlight
- □ Calcium and Phosphate supplement
- □ Safety measures to prevent falls
- □ Encourage exercise
- □ Teach use of assistive devices

Degenerative Bone Disease

- □ Osteoarthritis (OA)
 - ■Most common of all arthritis
 - ■Leading cause of pain and disability in elderly
 - ■Loss of articular cartilage in joints
 - ■90% people has x-ray evidence of OA by age 40
 - ■Gender and ethnicity effects
 - ■Localized
 - generalized

OA - pathophysiology

- □ Articular cartilage loss
- □ Bone exposed
- $\hfill\Box$ Bone thickens
- □ Bone spurs develop
- □ inflammation

OA- risk factors

- □ Increasing age
- □ Genetic
- □ Trauma
- □ Overweight
- □ Inactivity
- □ Hormonal

*ADAN

OA - Clinical Manifestations

- □ Joint involvement
 - Joint pain
 - Joint stiffness
 - Crepitus
 - Joint enlargement
 - Decreased ROM
 - Flexion contractures
 - Rarely does joint appear to be hot and inflamed (secondary synovitis)

OA- manifestation - (cont)

- □ Heberden's nodes
 - Most common
 - Distal joint
- □ Bouchard's nodes
 - Less common
 - Proximal joint

OA - Diagnosis

- □ Н&Р
- □ X-ray
- □ Lab test
 - HA hyaloronic acid

OA - Management

- □ Conservative
 - ROM
 - Ice and heat
- □ Medication
 - Analgesics
 - Topical
 - Corticosteroids
 - Muscle relaxants
- □ Surgery
 - Arthroscopy
 - arthroplasty

OA - nursing Diagnosis

- □ Chronic pain r/t muscle spasms and cartilage deterioration
- Impaired physical mobility r/t pain and degenerative changes
- □ Self care deficit

Autoimmune and Inflammatory Disorder

Rheumatoid Arthritis

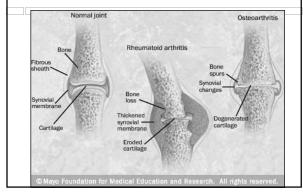

- □ Systemic disease
- Causes inflammation of the connective tissue
- □ 3 times as likely in women
- □ Onset age 20-40
- □ Cause unknown
 - Genetic link?
 - Infectious link?
 - Environmental link?
 - Hormonal link?

Rheumatoid Arthritis (RA) Patho

- □ Auto-antibodies form attack healthy tissue,
- □ Inflammation first in synovial membrane
- □ Inflammation spreads:
 - articular cartilage,
 - □ joint capsule,
 - □ ligaments and tendons
- Synovium thickens creating pannus:

RA (Pathophysiology)

RA - Manifestation

- □ Fatigue
- □ Loss of appetite
- □ Low grade fever
- □ Muscle and joint aches
- □ Stiffness
 - Most notable in the morning
- □ Multiple joints inflamed in symmetrical pattern
- $\hfill \Box$ Joints - red, swollen, painful, and tender

| | Systemic Symptoms of RA | | | |
|---|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|--|--|
| | □ Sjogren's syndrome □ Pleuritis □ Pericarditis □ Anemia □ Vaculitis | | | |
| | Diagnosis of PA |] | | |
| | Diagnosis of RA | | | |
| | □ History and physical examination □ Abnormal blood antibodies called: ■ Rheumatoid factor (RF) found in 80% of patients ■ Antinuclear antibody (ANA) □ Erythrocyte Sedimentation Rate (ESR) □ CBC □ Joint X-rays: swelling of the soft tissue | | | |
| | □ Bone scanning: can show inflamed joints □ CCP | | | |
| | □ Examination of the synovial fluid | | | |
| | RA - Management | | | |
| | | 1 | | |
| | □ Relieve pain □ Reduce inflammation □ Rest and exercise □ Plasmapherises □ Alternative treatments □ Medication □ NSAIDs □ Corticosteroids (oral) □ Antirheumatic □ Corticosteroids (injection) | | | |
| 1 | Sociologica (injection) | | | |

RA – Nursing Diagnosis

- □ Chronic pain
- □ Fatigue
- □ Ineffective role performance
- □ Disturbed body image

Infectious Disorder: Osteomyelitis

- □ Bacterial infection of bone
 - Cause fungus, parasites, virus, and bacteria (Staphylococcus Aureus most common)
- □ Acute: new bone infection lasting < 6 weeks
- □ Chronic: bone infection present > 6 weeks or recurring bone infection

Osteomyelitis - Patho

- Most common cause direct contamination of bone
 - Invasion from adjacent soft tissue infection
 - Peripheral artery disease
 - Bacteria lodge and multiply in bone

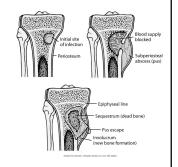

| 1 | 5 |
|---|---|

Osteomyelitis - Patho

- □ Phagocytosis
- □ Pus
- □ Periosteum lifts
- □ Ischemia and necrosis

Etiology

- □ Hematogenous Osteomyelitis
 - Sources of pathogens: UTI, soft tissue infections, endocarditis, and infected IV sites
 - Spine is common site of infection in adults
 - Affects older adults, IV drug abusers, sickle cell anemia
- □ Surgical prosthesis
 - Hip and knee replacements

Etiology (continued)

- Osteomyelitis from a contiguous infection
 - Infection from adjacent soft tissues
 - Most common cause of osteomyelitis in adults
 - Often due to:
 - Direct penetrating wounds
 - Decubitus ulcers
 - Neurosurgery
- Osteomyelitis associated with vascular insufficiency
 - Those with DM and PVD are at risk
 - Neuropathy exposes foot to trauma and pressure
 - Infection can spread to bone

| Osteomyelitis – Nursing Diagnosis | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| □ Risk for infection □ Hyperthermia □ Impaired physical mobility □ Acute pain | |
| Septic Arthritis | |
| □ Joint space invaded by pathogen □ Risk factors include bacteremia, RA □ Manifestation □ Abrupt onset □ Joint hot, swollen, painful, fluid filled □ Fever chills □ Medical emergency □ Aspirate fluids □ Abx □ Immobilize | |
| Connective Tissue Disorder | |
| □ Scleroderma □ Sjogren's Syndrome | |
| | |

Scleroderma - Etiology

- □ A chronic autoimmune disease
- □ 300,000 people in the US
- □ Ages affected 25-55 (Female > male)
- □ No known cause
- □ 2 Types
 - Localized
 - Systemic

Scleroderma Localized vs systemic

- □ LOCALIZED
- □ Thickened, hardened skin and scarring
- Skin appears tight, reddish, or scaly.
- □ Extreme itching
- Can be limited around fingers or in large areas such as limbs.
- □ Disabling but not fatal

- □ SYSTEMIC
- □ All skin symptoms
- □ CREST
- □ Complications
 - Musculoskeletal
 - Lungs
 - Heart
 - Digestive tract
 - Kidneys

Scleroderma - diagnosis

- □ Diagnosis is usually due to clinical suspicion.
- □ ANA id autoimmune process
- □ ESR up in inflammatory process
- □ CBC anemia
- $\hfill \square$ Bone biopsy confirm dx

Scleroderma Collaborative Management

- □ Treatment based on symptoms
- $\quad \ \, \square \,\, Medication$
 - □ Calcium channel blocker (Raynaud's)
 - ACE inhibitors
 - H2 receptor blocker
- □ Physical therapy
 - Stretching of muscles important
- □ Dialysis

Sjogren's Syndrome

- Causes inflammation of exocrine glands
- □ Mucosal dryness
 - Mouth
 - **□** Eyes
 - Throat
 - **■** Lungs
 - Vagina
 - Skin

Sjorgen's

- □ Diagnosis
 - H&P
 - Schirmer's test
- □ Treatment
 - Supportive
 - Artificial tears
 - Increased fluid intake
 - Avoid med that dry mucous membranes (i.e. decongestants)
